

COMMUNITY OF THE FUTURE

GENERATING CREATIVE SOLUTIONS

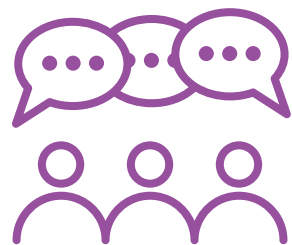

DESIGN MAP

Students will find innovative ways that each component of their model will be represented. This will help articulate and share their creative vision to inspire others.

WHAT IS CREATIVITY AND WHERE DOES IT COME FROM?

**Constraints and empathy are
often the drivers of creativity.**

A constraint is a limit or a restriction.

For example, when you go to school every day you are faced with many constraints.

What are they?

bell, time, bus route,
lunch menu, class
companions, teacher...

A few lessons ago we learned about
empathy...

How can being empathic help be
more creative?

If you are building a house...

The needs will be different if it is
for a young family,
a single person,
an elderly couple,
someone in a wheelchair,
someone who is blind...

But first, let's build your dices

Let's creatively
ideate while using
constraints and
empathy!

Your empathy dice
is blank, add in who
lives in your
community.

Let's practice by ideating a school!

- 1-Roll the constraints dice
- 2- Roll the empathy dice
- 3-Now ideate for a school using those guidelines.
- 4-Write down your ideas.
- 5-Share with the class.

KEEP GOING

What are you going to
ideate next?

How will this work?

Is this sustainable?

Is it durable?

What will you make?

EXIT SLIP

Share one idea that you
found using your
constraints and empathy,
what makes it sustainable ?
